

# The Genexis EasyWiFi app

Let end-users easily control their home network

## An app is part of the total deployment solution

Nowadays, the in-home network becomes more and more important within households. The increase in importance also increases the amount of helpdesk calls. However, many of these calls can easily be avoided if clear guidance is available.

This guidance can be brought to the end-user via an easy to use app. The Genexis EasyWiFi app offers the end-user control by providing onboarding, placement guidance and allowing them to manage the WiFi network settings.

In other words, the app is part of the total deployment solution. This will lead to more customer satisfaction, fewer helpdesk calls and thus saving on operational costs.

## Genexis EasyWiFi app

### WiFi settings

The app allows end-users to easily set or change their WiFi credentials. It also provides a QR-code to share wifi credentials.

### User friendly

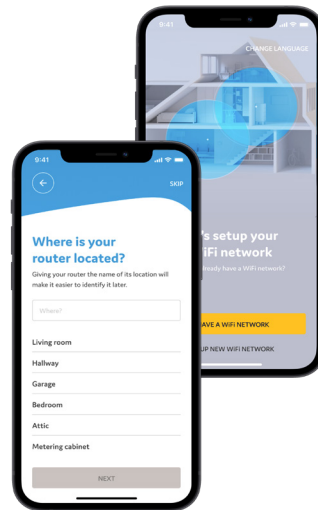

The app is designed from end-user perspective. Meaning, it is specifically designed to be as user friendly as possible.

### Download today!

The Genexis EasyWiFi app is available in the App Store and Play Store.

## Step-by-step onboarding

Installing new access points (i.e., Pure E600, Pulse EX600 and FiberTwist 6000) is easy to do. Simply scan the QR-code and follow the simple instructions and clear visualizations.

## Dashboard home network

The dashboard provides a clear overview of the home network status. It shows the WiFi status, if the connection is good or bad, and possible offline devices. In addition, end-users can change and share their WiFi credentials.

## Placement guidance

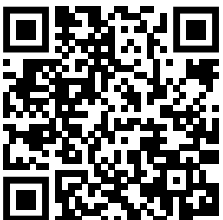

The placement of an extender is crucial, as an incorrect placed extender will still lead to a bad network experience. With placement guidance, the app helps end-users locate the 'perfect' spot.
